# Scalable, future-ready software for data centers of all sizes

If you're ready to bring your data center operations to a new level of efficiency, resilience and sustainability, look no further.

Our Brightlayer Data Center Infrastructure Management (DCIM) software delivers the core capabilities you need—secure monitoring, management, performance analytics, planning, modeling, reporting, etc.—to navigate today's biggest challenges while preparing for what's ahead. The comprehensive software is vendor neutral to maximize flexibility and return on investment.

## See your assets in real time

Continuously monitor power usage, track asset lifecycle, and detect issues before they lead to downtime or outages.

## Increase capabilities as you grow

Integrate with Brightlayer Distributed IT or EPMS software and other third-party systems. Our platform is flexible, modular and ready to grow with you.

## Make sense of your data and trends

Dashboards and reports highlight historical energy consumption data, battery health status, environmental conditions and more.

### Efficiency

Save time and resources with improved visibility and troubleshooting.

### Resiliency

Boost uptime and ROI with the ability to detect, predict and prevent equipment issues.

### Sustainability

Reduce energy consumption and adhere to regulatory requirements.

### Safety & security

Protect people and assets with continuous monitoring and proper maintenance.

# Gain the real-time visibility and control you need

With Brightlayer DCIM software, you always know what's happening, whether you operate one or multiple facilities.

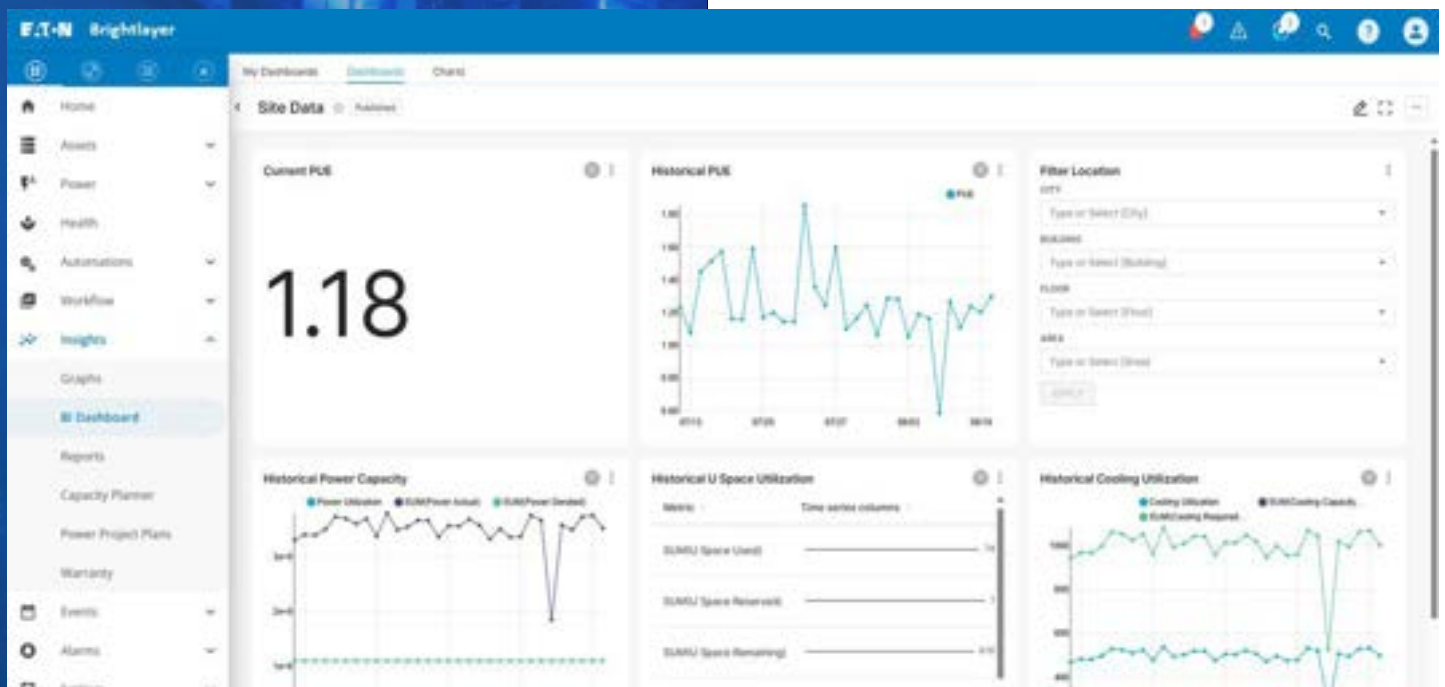

**Manage your end-to-end power chain** from point of entry to IT device power supply, and know where your assets are located and what the environmental conditions are across your data center so you can minimize operational costs and stranded capacity.

**Centrally track warranty and service history** for IT and operational (OT) assets, and maintain compliance with your lithium battery warranty—regardless of vendor—to save time and money, and reduce mistakes.

**View real-time and historical data** regardless of device vendor, vintage or protocol, and receive automated, customized alerts via text message, email reports and/or system notifications when issues arise. You decide when and how you're notified.

Monitor power, space and cooling resources over time to identify trends and outliers that need to be addressed.

# Take resilience and performance to the next level

Brightlayer DCIM software offers robust visualization tools and reporting features that help you spot anomalies, prevent downtime and boost IT staff productivity.

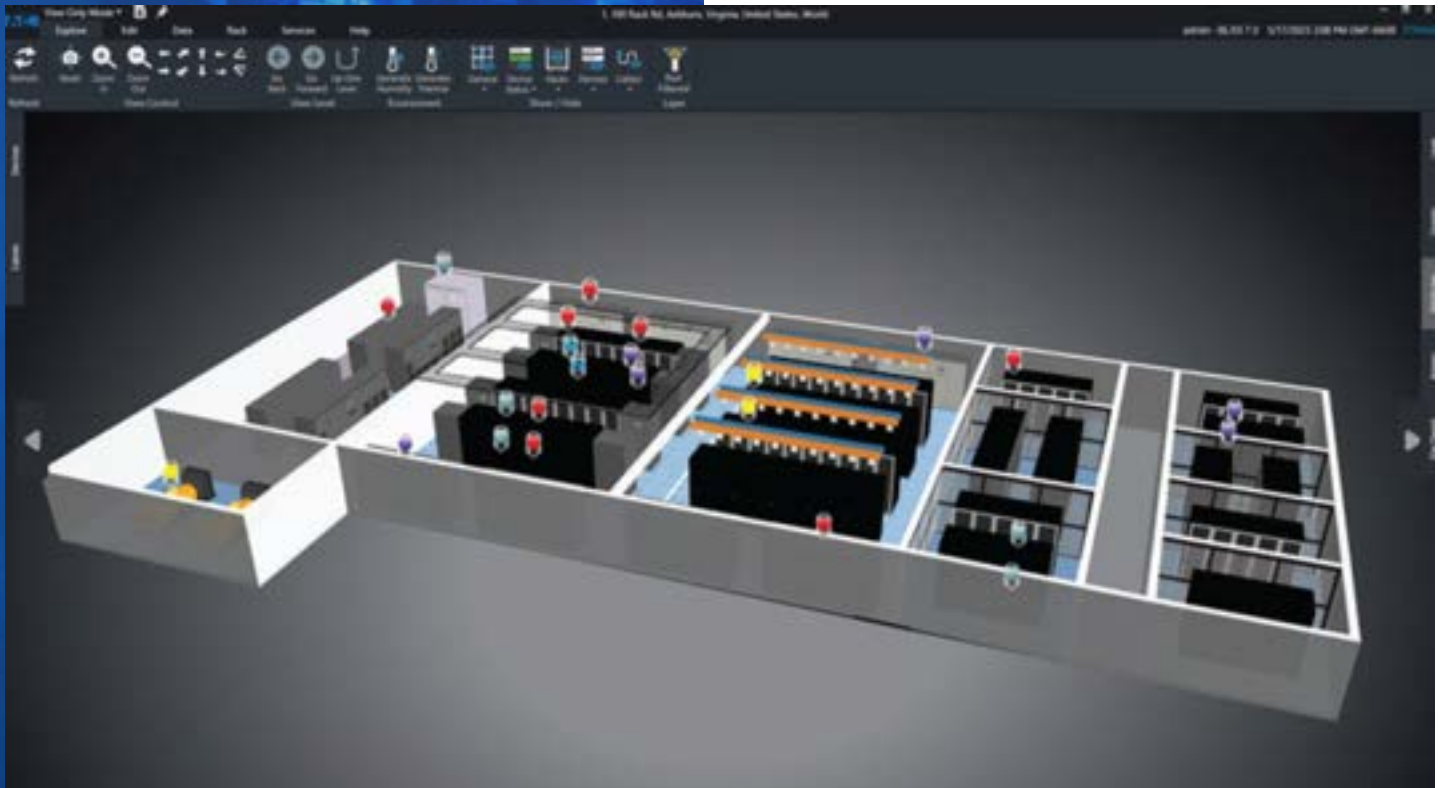

**Visualize your data center**—from a campus or facility to a room, rack or device—with tools that provide user-defined 2D and 3D digital twin representations for temperature and humidity, electrical utilization, critical power chain and more so you can make informed decisions.

**Access more than 90 standard reports** with an optional business intelligence dashboard that provides user-defined report tools and a flexible visualization of alarms, asset capacity, efficiency, metrics, service and systems.

**View dashboards and a user-defined home screen** for immediate visibility into key performance indicators such as power usage effectiveness (PUE) and capacity utilization to track sustainability metrics and ensure your data center is operating as expected.

3D visualization tool provides rack-level insights.

# Reduce complexity with software integrations

Brightlayer DCIM software integrates with VMware and other software, such as building management system (BMS), configuration management database (CMDB) and IT service management (ITSM) applications. Converging our software with other systems helps you increase staff productivity, simplify decision making and reduce costs.

You also have access to services and resources that make installing, configuring and using Brightlayer DCIM software faster and easier.

**Migration toolkit** when transitioning from another vendor's software.

**Virtual appliance** installation options for VMware and Podman.

**Bulk import tools** for location and device configuration.

**OVF package** that's easy to deploy.

**Training videos** that are short and easy to digest.

**Deployment services** available for purchase.

# Better together: Brightlayer DCIM and EPMS software

## A single, unified solution for power and energy management

Future-ready organizations know the importance of dissolving the traditional silos that isolate IT and OT networks. Instead of wading through different applications for the data that matters, why not leverage one data-rich source for all of your infrastructure management needs?

## Unlock unmatched clarity and confidence

By integrating Brightlayer EPMS and DCIM software into a single, unified platform, you gain complete visibility and actionable insights across your entire infrastructure.

This convergence empowers your team with the data they need to anticipate challenges, make informed decisions, and confidently plan for what's next. No matter your environment—be it a data center, industrial facility or a network of campuses—you benefit from seamless monitoring and management of all IT and OT assets, enabling you to navigate future complexities with clarity and assurance.

### Software convergence drives:

**Operational efficiency:** Decrease the time staff members spend managing different platforms and processing various data sources

**Risk reduction:** Correlate power events with environmental conditions for faster root cause analysis, troubleshooting and resolution.

**Strategic planning:** Use combined data to drive your organization's capacity upgrades, sustainability targets and cost optimization projects

**Scalability:** Stay ahead of the curve with software that is prepared to meet a more connected, complex and power-hungry future.
